Teaching Experience

Below is a list of courses that I have taught at Drake University since 1988. The level varies from courses for non-physics majors (predominantly students of biology and chemistry) to those for undergraduate physics majors of all levels. Some of the courses have also been taught at the graduate level. Furthermore, I have advised students for Honors and Masters theses, and I have been closely involved in the supervision of several PhD students in Britain and Germany. Finally, I have supervised post-doctoral researchers and other visitors at Drake University.

Course List:

- Introductory Physics I for Physics Majors (calculus-based)
- Introductory Physics II for Physics Majors (calculus-based)
- Introductory Physics III for Physics Majors (calculus-based)
- Introductory Physics I for Science Majors (algebra-based)
- Introductory Physics II for Science Majors (algebra-based)
- Modern Physics
- Theoretical Mechanics
- Electromagnetic Theory
- Advanced Classical Physics
- Quantum Mechanics
- Thermodynamics and Statistical Physics
- Atomic and Molecular Physics
- Physics Seminar I, II, III
- Research Participation I, II
- First-Year Seminar: Physics for Future Presidents
- First-Year Seminar: Energy for Future Presidents

In all courses for physics majors, the teaching of computational techniques has been implemented to enhance the learning experience for the students. In most cases, the students are asked to write their own programs first before making use of advanced packages such as *Mathematica*. In this way, they will learn the details of the numerical methods — including the many potential problems that advanced packages can hide to some extent.

We have also used very advanced *Mathematica* programming in Research Participation classes to produce movies that provide a much deeper understanding of atomic collision processes than simple two-dimensional or even three-dimensional graphs. This work has been recognized by the professional community through several invitations of my undergraduate students to present their work in invited talks at international meetings — including the Centennial Meeting of the American Physical Society in Atlanta, Georgia (1999). Examples of these movies can be found via links from the website <http://bartschat.drake.edu/klaus.html>.
